

## GETTING HERE

Approaching the entrance to Coecles Harbor, observe the green buoys to port and favor the north side of the channel at Reel Point. Inside the harbor heading west, follow navigational aids and maintain center of waterway. Give Red Nun "10" a wide berth of at least 40 yards. The depth between RN "10" and GC "9" is 5.5 ft at MLW. This is the shallowest area of the harbor and the bottom is soft. Continue northwest to R N "12" and pick up the green privately maintained markers leading to the marina. The normal tidal range is 2.5 ft.
